GRADE 12 ADVANCED | UNIT 2: RISE TO THE CHALLENGE!

My Roof Is Alive! • Living Rooftops and Sustainable Cities

Name: _____ Class: _____

Date: _____ Score: _____ / 10

PART 2 | GRAMMAR | 10 MARKS

Read the expository text and choose the correct answer (A, B or C) for each numbered gap. Each answer is worth 2 marks.

How Green Roofs Help Modern Cities

As cities grow, buildings cover areas that once supported trees and wildlife. Living roofs offer a practical response by turning unused rooftop space into small green habitats. When rainwater falls onto a green roof, the soil and plants **1. (absorb / absorbs / will absorb)** some of it, reducing the amount that enters city drains.

A rooftop garden can also make the air around a building **2. (cool / cooler / coolest)** than the air above an ordinary concrete roof. This difference is especially useful during long, hot summers, when urban heat becomes a serious concern.

These gardens need careful planning. If plants receive **3. (too little / many / several)** water, they may dry out; however, excessive watering can damage the building. Designers therefore select suitable vegetation and install reliable drainage systems.

In many projects, protective layers **4. (install / are installed / are installing)** beneath the soil to stop moisture from reaching the structure. Engineers check the roof's strength before adding any extra weight.

Green roofs may require higher initial costs; **5. (however / because / unless)**, they can provide long-term environmental benefits. They create habitats for insects, reduce runoff and make crowded neighbourhoods more attractive. With good maintenance, rooftops can become valuable parts of a sustainable city.

ENGLISH / VOCABULARY ASSESSMENT

PUSHING BOUNDARIES

UNIT 1 • GRADE 12 ADVANCED

NAME _____ CLASS _____ DATE _____

10 MARKS • 5 QUESTIONS • 2 MARKS EACH

Read the text and choose the correct word to complete each gap. Choose A, B or C.

EXPLORING NEW FRONTIERS

Throughout history, humans have pushed boundaries by exploring unfamiliar places and developing new technologies. Today, scientific discoveries allow researchers to investigate distant planets and understand the mysteries of life.

Before beginning a space **1. (voyage / database / consequence)**, scientists must carefully examine possible risks and prepare advanced equipment. Their ultimate **2. (distraction / destination / interruption)** may be a planet millions of kilometres away, where they hope to discover evidence of life.

Space exploration has made **3. (significant / heritable / cost-effective)** contributions to scientific knowledge, inspiring new inventions and improving communication systems on Earth. However, unexpected technical failures can have serious consequences, particularly when astronauts depend on complex equipment for survival.

Meanwhile, advances in genetic research have revealed that certain characteristics and medical conditions are **4. (flexible / heritable / automated)**, meaning they can be passed from parents to their children.

Scientists also rely on large digital systems to store and analyse information. A well-organised **5. (database / freedom / interruption)** allows researchers to access important findings and share discoveries with colleagues around the world.

Despite the difficulties involved, human curiosity continues to drive innovation and encourages future generations to explore possibilities beyond existing limits.

TEACHER'S ANSWER KEY

Grade 12 Advanced • Living Roofs Grammar Maze • Version 2

Gap	Correct answer	Grammar focus
1	A – absorb	Zero conditional / present simple
2	B – cooler	Comparative adjective
3	A – too little	Adverbial quantity expression
4	B – are installed	Present simple passive
5	A – however	Adverbial linker (contrast)

TOTAL: 10 MARKS | 5 × 2 MARKS

Assessment specification: one connected expository text; five gaps; three options each; grammar aligned to the supplied Grade 12 Advanced assessment blueprint.
