4 Writing	☐	☐	/ 40	

PART 1 · VOCABULARY

Pushing Boundaries

Word	Meaning	Example
privacy (n)	freedom from being watched or having your information shared	Online privacy is a growing concern.
freedom (n)	the right to act, speak or think without limits	Freedom of speech is protected by law.
automation (n)	using machines or computers to do work without people	Automation has replaced many factory jobs.
cost-effective (adj)	giving good results for the money spent	Solar panels are cost-effective in the long term.
interruptions (n)	things that stop you while you are doing something	Constant interruptions reduce concentration.
distractions (n)	things that take your attention away	Phones are major distractions in class.
voyage (n)	a long journey, especially by sea or in space	The voyage to Mars may take months.
destination (n)	the place you are travelling to	The ship reached its destination safely.
heritable (adj)	able to be passed from parents to children through genes	Eye colour is heritable.
significant (adj)	important or large enough to matter	There was a significant improvement.
consequence (n)	a result, often a bad one	Skipping sleep has serious consequences.
database (n)	an organised collection of data on a computer	The hospital stores records in a database.

Rise to the Challenge!

Word	Meaning	Example
megacity (n)	a city with more than ten million people	Tokyo is a megacity.
urbanisation (n)	the growth of towns and cities as people move there	Rapid urbanisation puts pressure on housing.
congestion (n)	too much traffic or crowding	Traffic congestion wastes hours every week.
pollution (n)	harmful substances in the air, water or soil	Air pollution harms children's health.
infrastructure (n)	basic systems such as roads, power and water	Good infrastructure attracts investors.
innovative (adj)	new, original and creative	The architect proposed an innovative design.

Word	Meaning	Example
kinaesthetic (adj)	learning through movement and doing things	Kinaesthetic learners prefer practical activities.
auditory (adj)	connected with hearing	Auditory learners remember what they hear.
insulation (n)	material that keeps heat, cold or noise in or out	Good insulation cuts energy bills.
drainage (n)	a system for taking water away	The street flooded because of poor drainage.
biodiversity (n)	the variety of plant and animal life	Wetlands protect biodiversity.
vegetation (n)	plants in general	Desert vegetation is sparse.

1.2 Word families and traps

- Families: urbanise → urbanisation · innovate → innovation, innovative · heredity → heritable, hereditary · automate → automation · distract → distraction · interrupt → interruption · pollute → pollution, pollutant · consequence → consequently.
- *Confusing pairs: consequence (result) ≠ conclusion · interruption (stops you) ≠ distraction (pulls your attention) · insulation ≠ isolation · vegetation (plants) ≠ biodiversity (variety of life) · auditory (hearing) ≠ oral (speaking) · voyage (long journey) ≠ trip.*
- Collocations: cost-effective solution · traffic congestion · urban infrastructure · rapid urbanisation · loss of biodiversity · a significant impact · serious consequences · invasion of privacy · heritable traits · innovative ideas.

THE 4-STEP METHOD 1) Read the whole text first. 2) Look before and after the gap: noun, verb or adjective? Singular or plural? 3) Say the sentence with each option. 4) Re-read the finished text: all 5 answers must make sense together.

1.3 Practice Text 1A · Pushing Boundaries

Space agencies are now planning the most ambitious (1) ____ in human history: a crewed journey to Mars. The long trip raises many questions about daily life aboard the spacecraft. Because astronauts will live in a very small space for months, (2) ____, the ability to be alone and unobserved, will be a serious challenge. Engineers are developing (3) ____ systems, in which machines carry out repetitive tasks such as monitoring oxygen levels, so that the crew can focus on science and decision-making. Scientists also want to reduce (4) ____ that stop astronauts from working, such as constant radio messages from Earth. Of course, every new technology can have a serious (5) ____, and experts are carefully studying the risks before the mission begins. Supporters say that the project is cost-effective in the long term, because discoveries on Mars could lead to new technology on Earth. Critics reply that the money should be spent on problems at home. Whatever the outcome, the destination has inspired millions of young people to study science.

1. A) database B) voyage C) freedom
2. A) congestion B) biodiversity C) privacy
3. A) insulation B) automation C) drainage
4. A) interruptions B) heritable C) pollution
5. A) destination B) database C) consequence

1.4 Practice Text 1B · Rise to the Challenge!

Every year, millions of people leave the countryside to look for work in cities. This process, known as (1) ____, has created megacities with populations of more than ten million. Although cities offer jobs and education, they also face serious problems. Roads built decades ago cannot handle today's traffic, so (2) ____ wastes hours of workers' time every week. Exhaust fumes from millions of vehicles cause (3) ____, which damages people's health, especially children and the elderly. Governments therefore need to invest in modern (4) ____, such as metro lines, power networks and water systems. Some cities have found (5) ____ solutions: Singapore, for example, covers buildings with plants to cool the air, while Copenhagen encourages cycling with dedicated lanes. Such projects show that good planning can make large cities cleaner, quieter and more pleasant places to live. Experts also argue that protecting green areas is essential, because they support biodiversity and provide a place for people to relax.

1. A) automation B) urbanisation C) privacy
2. A) congestion B) freedom C) vegetation
3. A) consequence B) database C) pollution
4. A) biodiversity B) infrastructure C) distractions
5. A) heritable B) kinaesthetic C) innovative

1.5 Quick-fire drill: choose the best word

1. Constant ____ make it hard to finish my work. (interruptions / voyage / drainage)
2. The ____ stores millions of customer records. (database / vegetation / freedom)
3. Tokyo is a ____ of more than thirteen million people. (megacity / voyage / insulation)
4. Learners who remember best by hearing are called ____ learners. (auditory / heritable / innovative)
5. Learners who learn best through movement and practical activities are ____. (kinaesthetic / significant / cost-effective)
6. Good ____ keeps the house warm in winter. (insulation / pollution / consequence)
7. Poor ____ caused flooding in the street. (drainage / privacy / automation)
8. Rapid ____ means that many people are moving to cities. (urbanisation / biodiversity / freedom)
9. Eye colour is ____: it passes from parents to children. (heritable / cost-effective / innovative)
10. The rainforest's ____ includes thousands of species. (biodiversity / congestion / voyage)

PART 2 · GRAMMAR

Part 2 is an expository text about living roofs. Decide which structure fits each gap.

2.1 Roof vocabulary you may need

Word	Meaning
living roof	a roof covered with plants
rooftop	the top surface of a building
vegetation	plants in general
insulation	material that keeps heat in or out
drainage	a system that removes water
absorb	take in (water, heat)
urban heat	higher temperatures in cities caused by buildings and traffic
biodiversity / habitat	variety of life / the natural home of an animal or plant
sustainable	able to continue without harming the environment

2.2 The seven power rules

Zero conditional	**if / when + present simple, present simple. General truths and scientific** facts. ➤ If you heat ice, it melts. ➤ Plants die if they do not get enough water.
Comparatives	**adj + -er than (short) · more / less + adj + than (long) · as … as · the + comparative … the + comparative. Use much / far / slightly to show the size** of the difference. ➤ A living roof is far cheaper to run than air conditioning. ➤ The hotter it is, the more electricity we use.
Adverbs of quantity	Countable: many, few, fewer, a few, several. Uncountable: much, little, less, a little. Both: a lot of, plenty of, enough, hardly any. few/little = not enough; a *few/a little = some.* ➤ There isn't much water in the tank. ➤ We have little time left, so hurry.
Present simple passive	**am / is / are + past participle. Facts, processes, routines.** ➤ Living roofs are installed on many schools. ➤ The plants are watered automatically.
Indirect questions	Use statement word order (no inversion, no do/does). Add if / whether for yes/no questions. ➤ I wonder how much a living roof costs. ➤ Could you tell me whether it is sustainable?

Adverbial linkers	**However, Nevertheless, On the other hand (contrast) · Therefore, As a result** (result) · In addition, Furthermore, Moreover (addition). Comma after the linker. ➤ They cost more. Nevertheless, they save energy. ➤ It rained heavily. As a result, the streets flooded.
Sequencing adverbs	**First / Firstly, Second, Then, Next, After that, Finally, Eventually, Meanwhile,** Afterwards. Used for processes and instructions. ➤ First, prepare the surface. Then, add the soil. ➤ Finally, plant the vegetation.

2.3 Practice Text 2 · My Roof Is Alive!

A living roof is a roof that is partly or completely covered with vegetation. The idea sounds modern, but it is actually centuries old. Today, living roofs (1) ____ on schools, offices and even airports around the world. The process is simple. (2) ____, a waterproof layer is placed on the roof. Then a drainage layer is added, and finally soil and plants are laid on top. Living roofs offer many benefits. They are (3) ____ energy-efficient than ordinary roofs because the soil provides excellent insulation, so buildings need (4) ____ air conditioning in summer. If it rains heavily, a living roof (5) ____ much of the water, which reduces the danger of floods. In addition, the plants create a habitat for birds and insects, and they help to cool the city by reducing urban heat. However, living roofs are not perfect: they cost more to build, and they must be maintained regularly. Many homeowners ask whether the extra cost is worth it, but studies suggest that the savings in energy bills soon repay the investment. Nevertheless, many architects believe that living roofs are a sustainable solution for crowded cities, where green space is scarce.

1. A) install B) are installing C) are installed
2. A) Finally B) First C) Meanwhile
3. A) more B) most C) as
4. A) fewer B) less C) many
5. A) will absorb B) absorbed C) absorbs

2.4 Mini-drills (two per rule)

Zero conditional:

1. If you heat ice, it ____ (melt).
2. Plants die if they ____ (not get) enough water.

Comparatives:

3. A living roof is ____ (cheap) to run than an air conditioner.
4. The ____ (hot) it is, the ____ (much) electricity we use.

Adverbs of quantity:

5. There isn’t ____ water in the tank. (many / much)
6. We have ____ time left, so hurry. (a few / little)

Present simple passive:

7. Solar panels ____ (install) on most new buildings.
8. The plants ____ (water) automatically.

Indirect questions:

9. How much does a living roof cost? → I wonder _____.

10. Is it sustainable? → Could you tell me _____?

Linkers:

11. Living roofs are expensive. ____, they save energy. (Nevertheless / Therefore)

12. It rained heavily. ____, the streets flooded. (As a result / However)

Sequencing:

13. ____, prepare the surface. ____, add the soil. (First / Then)

14. We waited for hours; ____, the bus arrived. (Finally / Meanwhile)

TIP Signal words: if + present, present → zero conditional · than → comparative · uncountable noun (water, time, air conditioning) → much / less / little · nevertheless / therefore → check the relationship between the two sentences.

PART 3A · READING (Personality: Nature or Nurture?)

Skills tested: 1 specific information · 4 details · 1 main points · 1 inference/prediction · 1 overall meaning. 3 marks each. The text is argumentative (B2.2, 330–350 words).

Question type	What to do
Specific information	Scan for the number or name, then read the sentence around it.
Detail	Find the sentence, then read the one before and after. The answer is a **paraphrase of the text.**
Main points	Which option sums up a whole paragraph? Wrong options are too narrow, too wide, or contradict the text.
Inference / prediction	Use context clues and the whole text. The answer is not stated, but the text strongly suggests it.
Overall meaning	What do ALL paragraphs share? Check the title and the last paragraph.

ARGUMENT TIP In an argumentative text, notice who says what: the writer's view, the supporters' view and the critics' view. Wrong options often give one side's claim as if it were the writer's.

3.1 Practice Text 3A

Is Personality Born or Made?

For more than a century, scientists and philosophers have argued about the origin of personality. One side, the nativists, claims that we are born with fixed traits. The other, the nurturists, insists that our character is shaped by upbringing and experience. Today, most researchers reject such a simple division, yet the debate continues to influence how we raise children, educate students and even judge criminals.

The case for nature is strong. Studies of identical twins who were separated at birth and raised in different families show surprising similarities. In one famous research project, twins who had never met chose the same careers, drove the same cars and even gave their pets the same names. Psychologists estimate that between 40 and 50 per cent of the differences in traits such as shyness and sociability are heritable. Defenders of this view add that babies display distinct temperaments within days of birth, long before parents or teachers can influence them.

Advocates of nurture, however, point out that heritable does not mean unchangeable. A child born with a tendency to be anxious may become confident if she grows up in a supportive home, whereas a naturally outgoing child may become withdrawn after years of criticism. Culture also matters: in some societies, speaking out is admired, while in others modesty is considered a virtue. Such differences cannot be explained by genes alone.

Most scientists now accept that nature and nurture interact. Genes provide a range of possibilities, and the environment determines which of them develop. This idea, called epigenetics, suggests that experiences can even switch genes on or off. Consequently, asking which factor is more important is a little like asking whether the length or the width of a rectangle matters more for its area.

Understanding this interaction has practical value. If personality were completely fixed, education and therapy would be pointless; if it were completely flexible, individual differences would not exist. The truth

lies between these extremes, and it offers hope: although we cannot choose our genes, we can choose the environments in which we grow.

3.2 Questions (3 marks each)

1. What proportion of the differences in traits such as shyness is estimated to be heritable?
   A) between 40 and 50 per cent
   B) between 10 and 20 per cent
   C) between 70 and 80 per cent

2. What did studies of twins separated at birth show?
   A) no similarities at all
   B) surprising similarities in their choices
   C) that nurture is stronger than nature

3. What do defenders of nature say about babies?
   A) They behave identically.
   B) They cannot be influenced by parents.
   C) They show distinct temperaments within days of birth.

4. According to advocates of nurture, an anxious child may become confident if…
   A) she grows up in a supportive home.
   B) she studies at a good school.
   C) she has many friends.

5. What does epigenetics suggest?
   A) Genes never change.
   B) Experiences can switch genes on or off.
   C) Parents can choose their children’s genes.

6. Which sentence best sums up paragraph 4?
   A) Genes are more important than the environment.
   B) Epigenetics is not accepted by scientists.
   C) Nature and nurture interact, so neither alone explains personality.

7. Which statement would the writer most likely agree with?
   A) The environment we grow up in can help people develop even though genes matter.
   B) Education is pointless.
   C) Personality is completely fixed at birth.

8. What is the text mainly about?
   A) Twins prove that nurture is irrelevant.
   B) Personality results from genes and environment working together.
   C) Scientists have ended the debate by proving that nature wins.

PART 3B · READING (Megacities and Small Towns) · C1.1

Skills tested: 3 details · 2 inferences · 1 mood and tone · 1 connection · 1 overall meaning. 2 marks each. The text is expository (C1.1, 330–350 words).

- *Mood and tone: note the writer's word choices (naive, strangely, honest conclusion, nevertheless). Is the* tone balanced, critical, enthusiastic, ironic or neutral?
- Inference: ask "What does the writer suggest without saying it directly?"
- Connection: match a new situation to the writer's idea or conclusion. Ignore surface details.

TIME TIP 3B is the hardest part and worth fewer marks per question. Spend no more than 2.5 minutes per question, mark it, and come back.

4.1 Practice Text 3B

Megacities and Small Towns: Where Is the Future?

By 2030, the United Nations expects more than forty megacities to exist, each home to at least ten million people. These giant urban areas are often portrayed as engines of progress, and with good reason. They concentrate universities, hospitals, investors and ideas in one place, which accelerates innovation. A young graduate in Shanghai or Mumbai can find in a single afternoon opportunities that might take years to appear in a rural district.

Yet this concentration has a price. Housing costs in megacities can swallow more than half of a worker's income, forcing millions to live in overcrowded neighbourhoods far from their jobs. Commuters spend hours each day in congested transport systems, and the air they breathe is frequently contaminated. Sociologists also note a less visible cost: in a crowd of millions, many residents feel strangely anonymous, with few relationships beyond their immediate family.

Small towns, by contrast, are often dismissed as sleepy places that young people are eager to escape. That image is increasingly outdated. Thanks to reliable internet connections, a graphic designer can serve clients on three continents from a village, and remote workers are discovering that rent is cheaper, streets are safer and neighbours actually know each other's names. Some governments have even begun offering financial incentives to professionals who agree to relocate to depopulated towns.

Nevertheless, it would be naive to present small towns as paradise. Their infrastructure is limited, specialist healthcare may be hours away, and cultural life is modest. Ambitious young people who stay may find that opportunities for promotion are scarce.

The honest conclusion, therefore, is that neither model is superior. Megacities reward those who thrive on speed and competition, while small towns suit people who value community and calm. The real challenge for planners is not to choose a winner but to ensure that both can offer decent housing, transport and services, so that where a person lives becomes a matter of preference rather than necessity.

4.2 Questions (2 marks each)

1. How many megacities does the United Nations expect by 2030?
   A) more than forty

B) about ten
C) exactly twenty

2. How much of a worker’s income can housing costs take in megacities?
A) about a tenth
B) almost nothing
C) more than half

3. What are remote workers discovering in small towns?
A) higher salaries
B) cheaper rent and safer streets
C) more cultural events

4. Why does the writer describe many megacity residents as “strangely anonymous”?
A) They feel lonely although they are surrounded by people.
B) They dislike their jobs.
C) They are famous.

5. What does the writer imply by mentioning government incentives?
A) Megacities are empty.
B) Some small towns are losing population.
C) Remote work is illegal.

6. How would you describe the tone of the text?
A) angry and hostile
B) humorous and playful
C) balanced and thoughtful

7. Which example best matches the writer’s conclusion?
A) A government closes all small village schools.
B) A council improves transport in both its crowded centre and its outlying villages, so residents can live where they prefer.
C) A company moves all its employees to the capital.

8. What is the main idea of the text?
A) Both megacities and small towns have strengths and weaknesses, and planners should make both liveable.
B) Megacities are better than small towns.
C) Small towns will soon disappear.

PART 4 · WRITING (40 marks)

Themes: Smart Homes and Comparing Places: A Critical Response. Functional language: FL.26 Comparing and

contrasting. Writing is typed on SwiftAssess.

5.1 Task 1.1 · Compare two points of view (15 marks)

Read a 200-word text that presents two different points of view, each in a separate paragraph. Compare and contrast them, summarising the main ideas in your own words, in 4–5 sentences.

Step	What to do
1	Read twice. Paragraph 1 = view A. Paragraph 2 = view B.
2	Underline each side's main reasons. Ignore examples and numbers.
3	Change the words: use synonyms and your own structures. Do not copy.
4	*Use contrast and similarity language: whereas, on the other hand, both, similarly, however.*
5	Check: 4–5 sentences, both views covered fairly, no personal opinion.

Practice text: Smart Homes, Blessing or Curse?

Supporters of smart homes believe that connected devices make everyday life easier, safer and cheaper. Thermostats learn a family's routine and adjust the temperature automatically, which can reduce energy bills by up to a quarter. Voice assistants switch off lights, play music and answer questions without anyone touching a button, and security cameras send an alert to the owner's phone if a stranger approaches the door. For elderly or disabled residents, these technologies can mean the difference between depending on others and living independently.

Critics, however, warn that the price of convenience is privacy. Smart speakers and cameras constantly collect data about when people are at home, what they say and what they buy, and this information may be shared with companies or stolen by hackers. Moreover, a house that depends on the internet can stop working altogether when the connection fails or the manufacturer ends its software support. Some experts also fear that people who rely on automation will gradually lose basic practical skills. They argue that owners should be careful before filling their homes with technology.

Your summary (4–5 sentences):

MODEL ANSWER The text presents two opposing views about smart homes. Supporters argue that connected devices save energy, increase security and help elderly or disabled people live independently. Critics, on the other hand, believe that these devices threaten privacy because they collect personal data that could be shared or hacked. They also warn that smart homes stop working without internet or software support and may weaken people's practical skills. Therefore, the two sides disagree about whether the convenience is worth the risks.

5.2 Task 1.2 · Comparative essay (25 marks, at least 220 words)

Typical prompt: Write an essay about technology in the home in which you compare the views of people who welcome new devices and people who fear them. (1) Compare the main arguments of both sides. (2) Explain which point of view you agree with and why. (3) Suggest how people can enjoy the benefits while avoiding the problems. Write at least 220 words in paragraphs.

Paragraph	Purpose	Words
1 Introduction	Introduce the debate + your overall position	30–35
2 View A	Main arguments of the first side, with reasons	50–55
3 View B	Main arguments of the other side; compare and contrast with view A	50–55
4 Your position	Which view you agree with + reasons (support your choice)	45–50
5 Conclusion	Balanced final thought or solution	30–35

FL.26 Comparing and contrasting	Use these phrases
Similarity	similarly · likewise · in the same way · both … and … · just as … · as well as · like
Contrast	whereas · while · in contrast · by contrast · on the other hand · unlike · however · nevertheless · although · despite / in spite of · compared with / to
Degree of difference	far more … than · slightly less … than · not nearly as … as · the more … the more …
Your position	I side with … · I am inclined to agree with … · I find the argument that … more convincing · The evidence for … is stronger
Concluding	Overall · On balance · Taking everything into account · To sum up

WATCH OUT Do not write about only one side. The examiner wants a fair comparison first, then your reasoned choice. Use cohesive devices (linkers, pronouns like this, such, the former, the latter) to connect ideas.

Model essay (about 260 words)

Big City or Small Town?

People have long debated where a young person can build the best life. Some insist that only a large city offers real opportunities, while others claim that a small town provides a healthier and happier existence.

After considering both views, I believe that the choice depends on a person's goals, although small towns are more suitable than most people assume.

Supporters of city life emphasise opportunity. Cities contain more universities, companies and cultural events than small towns, so ambitious people can build careers more quickly. Similarly, the variety of people in a city exposes residents to new ideas and encourages creativity. These arguments are convincing, particularly for those working in fields such as medicine or finance.

In contrast, defenders of small towns focus on quality of life. Rent is far cheaper, streets are safer and neighbours form closer relationships. Unlike city commuters, who spend hours in traffic, small-town residents can reach work in minutes and enjoy more free time. Furthermore, remote work now allows many professionals to earn a city salary while living quietly in the countryside.

Personally, I find the second argument slightly more persuasive, because modern technology has reduced the main advantage of cities. While a city is still essential for some careers, many jobs no longer require employees to be physically present. Whereas a decade ago the choice meant sacrificing ambition for comfort, today it is possible to enjoy both.

Overall, neither place is superior. Young people should compare their priorities carefully before deciding where to settle.

Rubric area	What examiners look for
Task achievement	Compares both views fairly, states and supports your own position, answers all 3 prompts, 220+ words
Organisation and cohesion	Clear paragraphs, topic sentences, cohesive devices, referencing and substitution
Range of language	Comparison structures, conditionals, passives, relative clauses, precise vocabulary
Accuracy	Correct grammar, spelling and punctuation; only occasional errors

TOP-SCORE HABITS Plan for 4 minutes (view A + view B + your position) · one idea per paragraph · use at least 5 linkers from FL.26 · leave 4 minutes to proofread · check the word counter.

5.3 Common mistakes

✗ Wrong	✓ Right
more cheaper / more better	cheaper / better
In contrast of cities, …	In contrast to cities, …
Despite of the cost	Despite the cost / In spite of the cost
Less people live there.	Fewer people live there.
Comparing to cities, towns are quiet.	Compared with cities, towns are quiet.
I agree to this view.	I agree with this view.
Both cities and towns is useful.	Both cities and towns are useful.

✗ Wrong	✓ Right
The more people come, the more crowded is the city.	The more people come, the more crowded the city becomes.

5.4 Your turn: choose a prompt and write

1. Write an essay about online learning and classroom learning in which you compare the views of people who prefer each. (1) Compare the main arguments of both sides. (2) Explain which point of view you agree with and why. (3) Suggest how students can combine the benefits of both.

2. Write an essay about life in a large city and life in a small town in which you compare what each offers young families. (1) Compare the advantages and disadvantages of each place. (2) Say which place you would choose and why. (3) Explain what governments can do to improve the weaker option.

Write here (220+ words):

HELP KEY

Section	Answers
Part 1 · Text 1A	1 B voyage · 2 C privacy · 3 B automation · 4 A interruptions · 5 C consequence
Part 1 · Text 1B	1 B urbanisation · 2 A congestion · 3 C pollution · 4 B infrastructure · 5 C innovative
